

IN THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1-9 (Canceled).

10 (Currently Amended). An electronic apparatus comprising:

a first substrate;

a display region provided over said first substrate;

a sensor region provided over said first substrate and provided inside a sealing material provided over said first substrate;

a second substrata opposed to said first substrate; and

a spacer provided between said second substrate and said first substrate,

wherein no spacer is provided over said sensor region of said first substrate.

11 (Previously presented). An apparatus according to claim 10 wherein said electronic apparatus is incorporated into a personal computer.

12 (Previously presented). An apparatus according to claim 10 wherein said sensor region comprises a switching transistor.

13 (Previously presented). An apparatus according to claim 10 wherein said sensor region comprises a semiconductor film comprising amorphous silicon.

14 (Currently Amended). An electronic apparatus comprising:

a first substrate;

a display region provided over said first substrate;

a sensor region provided over said first substrate and provided inside a sealing material provided over said first substrate;

a second substrata opposed to said first substrate; and

a spacer provided between said second substrate and said display region of said first substrate,

wherein no spacer is provided over said sensor region of said first substrate.

15 (Previously presented). An apparatus according to claim 14 wherein said electronic apparatus is incorporated into a personal computer.

16 (Previously presented). An apparatus according to claim 14 wherein said sensor region comprises a switching transistor.

17 (Previously presented). An apparatus according to claim 14 wherein said sensor region comprises a semiconductor film comprising amorphous silicon.

18 (Currently Amended). An electronic apparatus comprising:

a first substrate;

a display region provided over said first substrate;

a sensor region provided over said first substrate and provided inside a sealing material

provided over said first substrate;

a second substrata opposed to said first substrate;

a liquid crystal provided in at least said display region and provided between said first substrate and said second substrate; and

a spacer provided between said second substrate and said first substrate and provided in said liquid crystal,

wherein no spacer is provided over said sensor region of said first substrate.

19 (Previously presented). An apparatus according to claim 18 wherein said electronic apparatus is incorporated into a personal computer.

20 (Previously presented). An apparatus according to claim 18 wherein said sensor region comprises a switching transistor.

21 (Previously presented). An apparatus according to claim 18 wherein said sensor region comprises a semiconductor film comprising amorphous silicon.
